Dear ICI 2013 Sponsor,

The 15th International Congress of Immunology (ICI) will take place in Milan from August 22 to 27, 2013. As the ICI, which is convened every three years, is the most important meeting in Immunology gathering between 6,000 to 8,000 attendees, we believe it represents an excellent showcase for your activities and your products related to Immunology.

As you can see from the scientific program, http://www.ici2013.org/s_programme/ the 15th ICI will explore all fields of immunology, with emphasis on human immunology, translational and clinical immunology, and immunointervention. The meeting runs for 5 days and offers each day 2 plenary lectures, 6 parallel symposia (one for each track), 8 parallel lunchtime lectures, 2 workshop sessions (each with 12 parallel workshops), one poster session, plus Industry-sponsored tutorials and symposia. Participants will enjoy over 200 talks from invited speakers and 600 oral presentations selected from abstracts. An introductory Immunology course just before the ICI, and satellite symposia at several locations in Italy will complement the scientific program.

FOCIS has contributed to shape the scientific program of the meeting, coordinating the organization of the two clinical tracks, for a total of 12 symposia and 48 workshops, plus a substantial number of industry sponsored symposia. The generalist and cross-disciplinary structure of the ICI 2013 program offers a unique opportunity to reach researchers, academicians, physicians, and health professionals sharing a global expertise in Immunology, both basic and clinical. This diverse audience represents an excellent target for marketing your products/services and a rare opportunity to present in front of the world leaders in the field your company’s activities related to Immunology. We look forward to meeting you in Milan in 2013.

Kind regards,

Abul K. Abbas, MD  Robert Nussenblatt, MD  David Hafler, MD
